

Ripple Effect Water Minute #2 - Waterfowl

Have you ever heard the harmonic sounds of geese honking overhead? Or maybe you have looked up into the beautiful fall skies and have seen the beauty of a flock of ducks or Canadian geese flying in unison. Waterfowl is abundant in the Red River Basin, and you can help ensure that these treasures of nature are here to stay.

Every fall waterfowl use parts of the Red River Basin to rest and feed during migration to southern states. It is crucial to the survival of not only the waterfowl, but wildlife as well, that the citizens that live here do their part to help take care of the water resources these waterfowl depend on for their survival.

If you see garbage near the river, pick it up. Even something as small as disposing of trash can help in the process of making sure that waterfowl will remain here for future generations to enjoy.

This Ripple Effect water minute is brought to you by the Red River Basin Commission.
